Current operational evidence register

Buyer: Aster Finance (fictional).

Vendor: Cedar Operations | Service: Managed Support Service | Environment: production

Coverage: October 2026 (2026-10). Issued: 2026-10-12. Version: 1.0. Review as of: 15 October 2026.

Vendor questionnaire assertions are claims; operational records describe only the supplied fictional records. Neither independently verifies real-world infrastructure.

Privileged access

Access review AR-2026-10 completed 12 October 2026: 12 privileged production accounts, each with a named owner. Approver: Mira Rao (fictional). One departed operator account was removed.

MFA enforcement

Configuration export AUTH-2026-10 dated 12 October 2026: 11 interactive privileged accounts enforce MFA; the remaining interactive privileged account breakglass-admin has MFA bypass enabled. It was used interactively on 11 October 2026. No policy exception was approved.

Vulnerability remediation

Ticket VULN-41: critical finding discovered 3 October 2026, fixed 6 October and successfully retested 7 October 2026. This is the sole critical finding in the October register.

Security testing

Evidence register: September security test report TEST-2026-09 was requested but is not attached to this packet. This register does not reproduce the report or its findings.

Incident response

Response configuration IR-12 verified 12 October 2026: notify Aster Finance within 24 hours of discovering a customer-data incident. Monitored buyer contact: incident-contact@aster.example; monitored daily by the fictional response team.

Evidence currency

This current operations register was issued 12 October 2026 and supersedes the July register. All entries above cover the named production service during October 2026.
