Customer-data handling policy v3.0

Document: policy-v3 | Issued: 2026-10-01

1. Scope and storage requirements

Approved internal policy of the fictional buyer Aster Finance. Effective 1 October 2026. Approver: Aster Finance Risk Committee (synthetic). Review period: October 2026. This is an internal contractual review standard, not a statement of universal legal requirements.

Scope: Nimbus Support, Customer Support Platform, production environment, all Aster Finance customer records and their backups. Primary storage and backup storage are separate controls.

Primary customer-data stores for the reviewed production service must be located in India.

All customer-data backups for Nimbus Support's Customer Support Platform production service must remain physically stored in India throughout October 2026.

A record of primary storage in India does not establish the location of backup replicas. Temporary replicas, disaster-recovery copies and archived customer-data snapshots are included in the backup requirement.

Customer-data handling policy v3.0

Document: policy-v3 | Issued: 2026-10-01

2. Deletion and privileged access evidence

Provide a completed deletion certificate for request DEL-2026-041 covering Aster Finance production customer data, primary stores and backups, with execution date, scope and approver.

A planned deletion, retention policy, contractual promise or deletion receipt for a different vendor, service, environment or request does not satisfy this evidence requirement. Lack of evidence is not proof that deletion did not happen.

Provide an approved access review completed in the last 90 days that covers all privileged production accounts and records removals or an explicit no-removal decision.

The access review must identify an approver and completion date. A role catalogue or planned review alone does not prove completion.

Document: policy-v3 | Issued: 2026-10-01

3. Incident commitments and evidence currency

A signed service commitment must require notification to Aster Finance within 24 hours of discovering a customer-data incident and identify a monitored incident contact.

Operational evidence used for this review must be dated within 90 days of 15 October 2026 and identify the same vendor, service and production environment; superseded records must be excluded.

A current signed contract remains applicable during its effective term. Archived historical documents may explain history but must not override current records. Failed ingestion must remain an unresolved coverage limitation.

Controls: data_location, backup_location, deletion, access_review, incident_response, evidence_currency. A reviewer must record decisions separately from automated evidence analysis.
